Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>
#include <stdlib.h>

int findFloor(int arr[], int low, int high, int x) {
    if (low > high)
        return -1;
    if (x >= arr[high])
        return arr[high];

    int mid = low + (high - low) / 2;

    if (arr[mid] == x)
        return arr[mid];

    if (mid > 0 && arr[mid - 1] <= x && x < arr[mid])
        return arr[mid - 1];

    if (x < arr[mid])
        return findFloor(arr, low, mid - 1, x);

    return findFloor(arr, mid + 1, high, x);
}

int main() {
    int n;
    if (scanf("%d", &n) != 1) return 0;

    int *arr = (int *)malloc(n * sizeof(int));
    for (int i = 0; i < n; i++) {
        scanf("%d", &arr[i]);
    }

    int x;
    scanf("%d", &x);

    int result = findFloor(arr, 0, n - 1, x);
    printf("%d\n", result);

    free(arr);
    return 0;
}
